

19 November 1952 (Wednesday)

On 19 November 1952, SI and H. experimentation was carried on in Ruidding 13, Room 20, with a and by Messrs and T. Also present was and by Messrs and T. Also present was and the fact that the first time. In view of the fact that the first seem the writer again wenk into some detail on the Artichoke work and tested falling back technique and hand rising technique.

In both instances, responded very well. Immediately thereafter, responded to the eye fixtation technique, succeeded in obtaining a good hypnotic situation in regard to

The rest of the session was spent in a general discussion of the hypnotic technique and routine tests for death and induction. In this connection, it should be noted that proved to be an excellent subject and within the route tests.

As noted previously, neither nonadvanced over their previous induction points and very clearly demonstrated again that they were not good subjects.
